Submission of manuscripts

Articles for publication in BIONET-Journal – Biocentric Sciences are accepted

By sending the articles to following adress

bionet.publication@gmail.com

Please include your orcid-registration number.

Review process

Manuscripts submitted to the editorial office are assessed by reviewers. The rules of review are in conformity with the guidelines of the international standards. The editorial office chooses a reviewer based on the subject of the submitted manuscript. The competences of a reviewer are confirmed by the academic achievements. The reviewer is independent of the author of the reviewed manuscript and the editorial office of the journal. Each paper is evaluated in the double-blind review process, in which authors do not know the identity of their reviewers, nor do the reviewers know the identities of the authors. Reviewers assess the work using the electronic system on the basis of questions prepared for a specific title. Reviewers may also provide individual comments on the article. The recommendations of the reviewers are presented to the author in writing. The review procedure respects the principle of confidentiality

Manuscript preparation

Submissions should be written in English (Times New Roman, 12 pt, double-spaced) and follow APA-7 style guidelines (including text citations and reference list): <http://www.apastyle.org/>

The title page should provide: full names of all authors, affiliations of the authors, manuscript full title, running title, complete address for correspondence with e-mail to speed up contacts with authors, and source(s) of support in the form of grants (quote the number of the grant).

Scope of work of authors

Authors are required to include information of responsibility in the manuscript that specifies the contribution of every author. According to the international standards each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. Acquisition of funding, collection of data, or general supervision of the research group, alone, does not justify authorship.

The authors should give 3–5 key words, which as a general rule should not be terms that occur in the title of the paper.

Footnotes are not used. If necessary, please use endnotes numbered consistently throughout the text. Manuscripts should be in their final form when submitted.

Original articles should be about 7500 words, that is 20 type-written A4 pages. Each research article should contain a structured abstract (200–250 words), divided into Background, Participants and Procedure, Results, and Conclusions. Subject matter should be organized under suitable headings and sub-headings such as: Structured Abstract, Introduction, Participants and Procedure, Results, Discussion, Conclusions, Acknowledgments and References.

BIONET-Journal – Biocentric Science accepts case reports, theoretical works. Case reports and theoretical works should constitute a significant contribution to the biocentric science of health. Case reports and theoretical works should not exceed 2300 words, that is 6 A4 pages, excluding the unstructured abstract (100–150 words) and references.

Short reports should be no more than 3200 words – about 8 A4 pages, excluding the structured abstract (100–150 words) and references. There should be no more than 20 references, no more than 2 tables and 1 figure, and no more than 5 authors.

Review articles should follow the format for a regular article, but should be submitted only after consultation with the Editors. Each review article should contain an unstructured abstract (100–150 words).

Tables and figures (photographs) should be numbered using Arabic numerals, placed on separate pages and submitted as separate files. Figures should be saved in one of the following formats: .cdr, .tif, .jpg, .ai, .bmp or .eps. Photographs submitted electronically should have a resolution of 300 dpi and should be saved as .tif or .jpg files. The locations of tables and figures should be indicated in the body of the text.

If a figure (photograph) has been previously published, the source should be given, and written permission to use it should be obtained from the copyright holder.

Proofs

The editorial office reserves the right to make language corrections without consulting the author. Other changes are consulted with the authors. The editorial office sends manuscripts to the authors for authorization.

Conflict of interest

Authors are expected to describe sources of the research funding, the role of any sponsor in planning, execution and analysis of the study, and the influence (bias) the funding organization had on the content of the article. Other relationships (such as employment, consultancies, stock ownership, honoraria, or paid expert testimony) providing potential sources of conflict of interest in relation to the submitted article should also be disclosed.

Patients' rights and informed consent

When reporting experiments on human subjects, authors should indicate whether the procedures followed were in accordance with the Helsinki Declaration of 1975, as revised in 2000 (concerning ethical principles for the medical community and forbidding releasing the name of the patient, initials or the hospital evidence number) and with the ethical standards of the responsible committee on human experimentation (institutional and national). Information regarding the ethical standards for conducting the research and the informed consent of patients for participating in the studies should be included in the methods section of articles describing studies in which the diagnostic intervention or the treatment included non-routine procedures. Authors presenting case studies are obligated not to disclose patients' personal data. Regarding photographs, in case of any doubt that the image inadequately protects the patient's anonymity, his consent is required for publication.
